- Pioneer in Fluorinated Anesthetics
- 100 ml Bottle (6 per case)
- 250 ml Bottle (6 per case)
- Color Coded
- Meets USP and PhEur Specifications
- Produced by Halocarbon Products Corporation

Isoflurane, USP

Halocarbon Products Corporation is one of the world's leading producers of fluorochemicals. An outgrowth of our experience with fluorochemicals is our production of fluorinated anesthetics. Fluorinated anesthetics were developed to solve the problem of fires in the operating room caused by the use of ether. Halocarbon was the first to make a fluorinated anesthetic in the United States with the production of fluroxene in 1960. In 1970, we were the first U.S. company to produce generic halothane. In 1997, we started production of the next-generation fluorinated anesthetic isoflurane. Halocarbon is now working on new fluorine-based agents.

Halocarbon's dedicated isoflurane bottling line in South Carolina, USA.
